MAIN FINDINGS

The main remarks of the participants are as follows.

- (1) It is important to clearly differentiate roles between machines and people and to consolidate farm fields suitable for smart agricultural machinery. On top of that, it is important to use various smart agriculture technologies on the ground.
- (2) Due to the increase in scale of farming and the increase in size and efficiency of machines, the current agriculture tends to emphasize more on business than the natural environment. However, considering sustainable agriculture and livelihoods, it is urgent to establish policies to focus on the environmental aspects.
- (3) In order to promote environment-friendly agriculture, it is crucial that consumers recognize its value. The request from the actual demand directly motivates the producer's efforts.
